Presentation
Example

SLIDES STRUCTURE AND DESIGN

- Don't overcrowd slides
- Stick with one theme
- Limit the number of colors
- Use animations and graphics
- Use dark colors
- Number the slides

SLIDES STRUCTURE AND DESIGN

Don't Overcrowd Slides: Avoid filling slides with excessive content. Keep the text concise and use bullet points or short phrases to convey information. Leave ample white space to maintain a clean and uncluttered look.

Stick with One Theme: Choose a consistent theme or template for your slides. This ensures a cohesive and professional appearance throughout your presentation. Use the same font, colors, and graphical elements across all slides.

Limit the Number of Colors: Stick to a limited color palette to maintain visual harmony and prevent distractions. Select a few colors that complement each other and use them consistently throughout your slides.

Use Animations and Graphics: Incorporate tasteful animations and relevant graphics to add visual interest to your slides. Animations can help emphasize key points or transition between sections smoothly. Graphics such as icons, charts, or images can enhance understanding and engagement.

Use Bold Colors: Utilize bold and vibrant colors sparingly to draw attention to important elements or key messages. However, be cautious not to overuse them, as they can become overwhelming or distracting.

Number the Slides: Consider adding slide numbers to help both you and your audience keep track of the presentation's progress. Numbering the slides also allows for easy reference during Q&A sessions or discussions.

- 03** SOLUTION
- 04** APPROCHE
- 05** DIAGRAMMES
- 06** IMPLÉMENTATION
- 07** PERSPECTIVES

INTRO

- Thank the juries, the promoter and the guests for their presence.
- Introduce yourselves.
- The project title and what it is about.
- Present the host organization (for external students)

PROBLÉMATIQUE

The problem

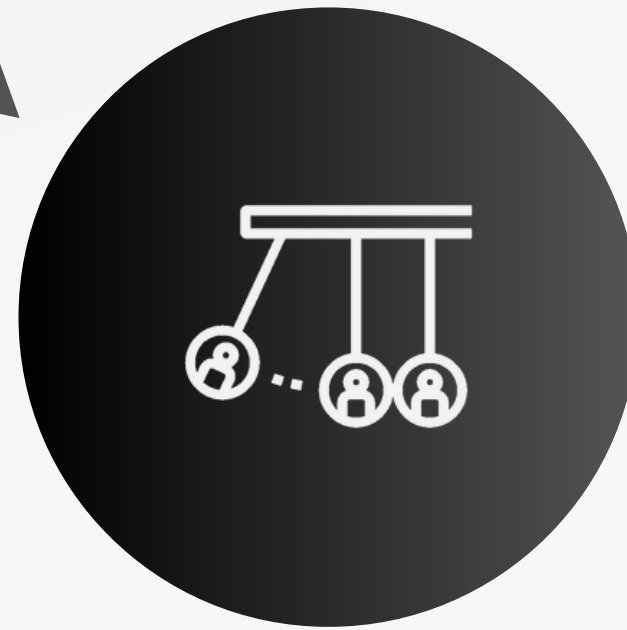

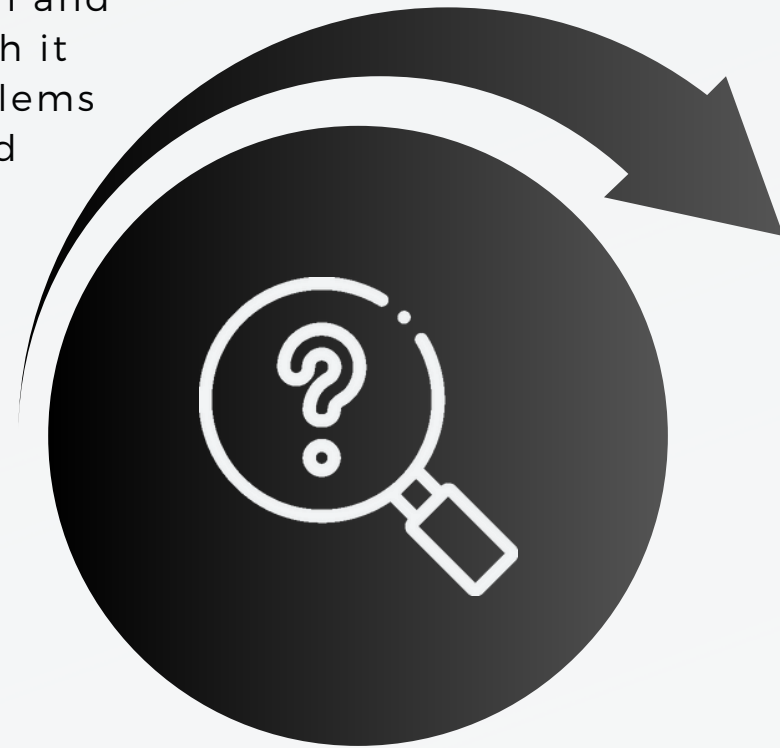

One main problem and
what comes with it
Or different problems
you've noticed

PROBLÉMATIQUE

The problem

One main problem and
what comes with it
Or different problems
you've noticed

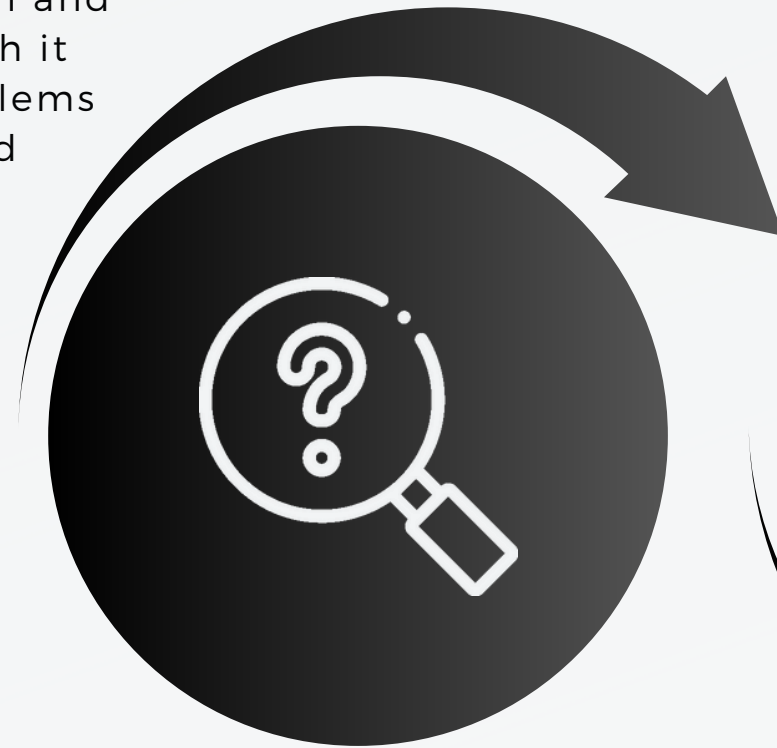

The impact

Mention the impact in
our country specially

PROBLÉMATIQUE

04

APPROCHE 1

Details with key-words,
model, data...etc

APPROCHE 2

if there is one, same
thing

COMPARAISON

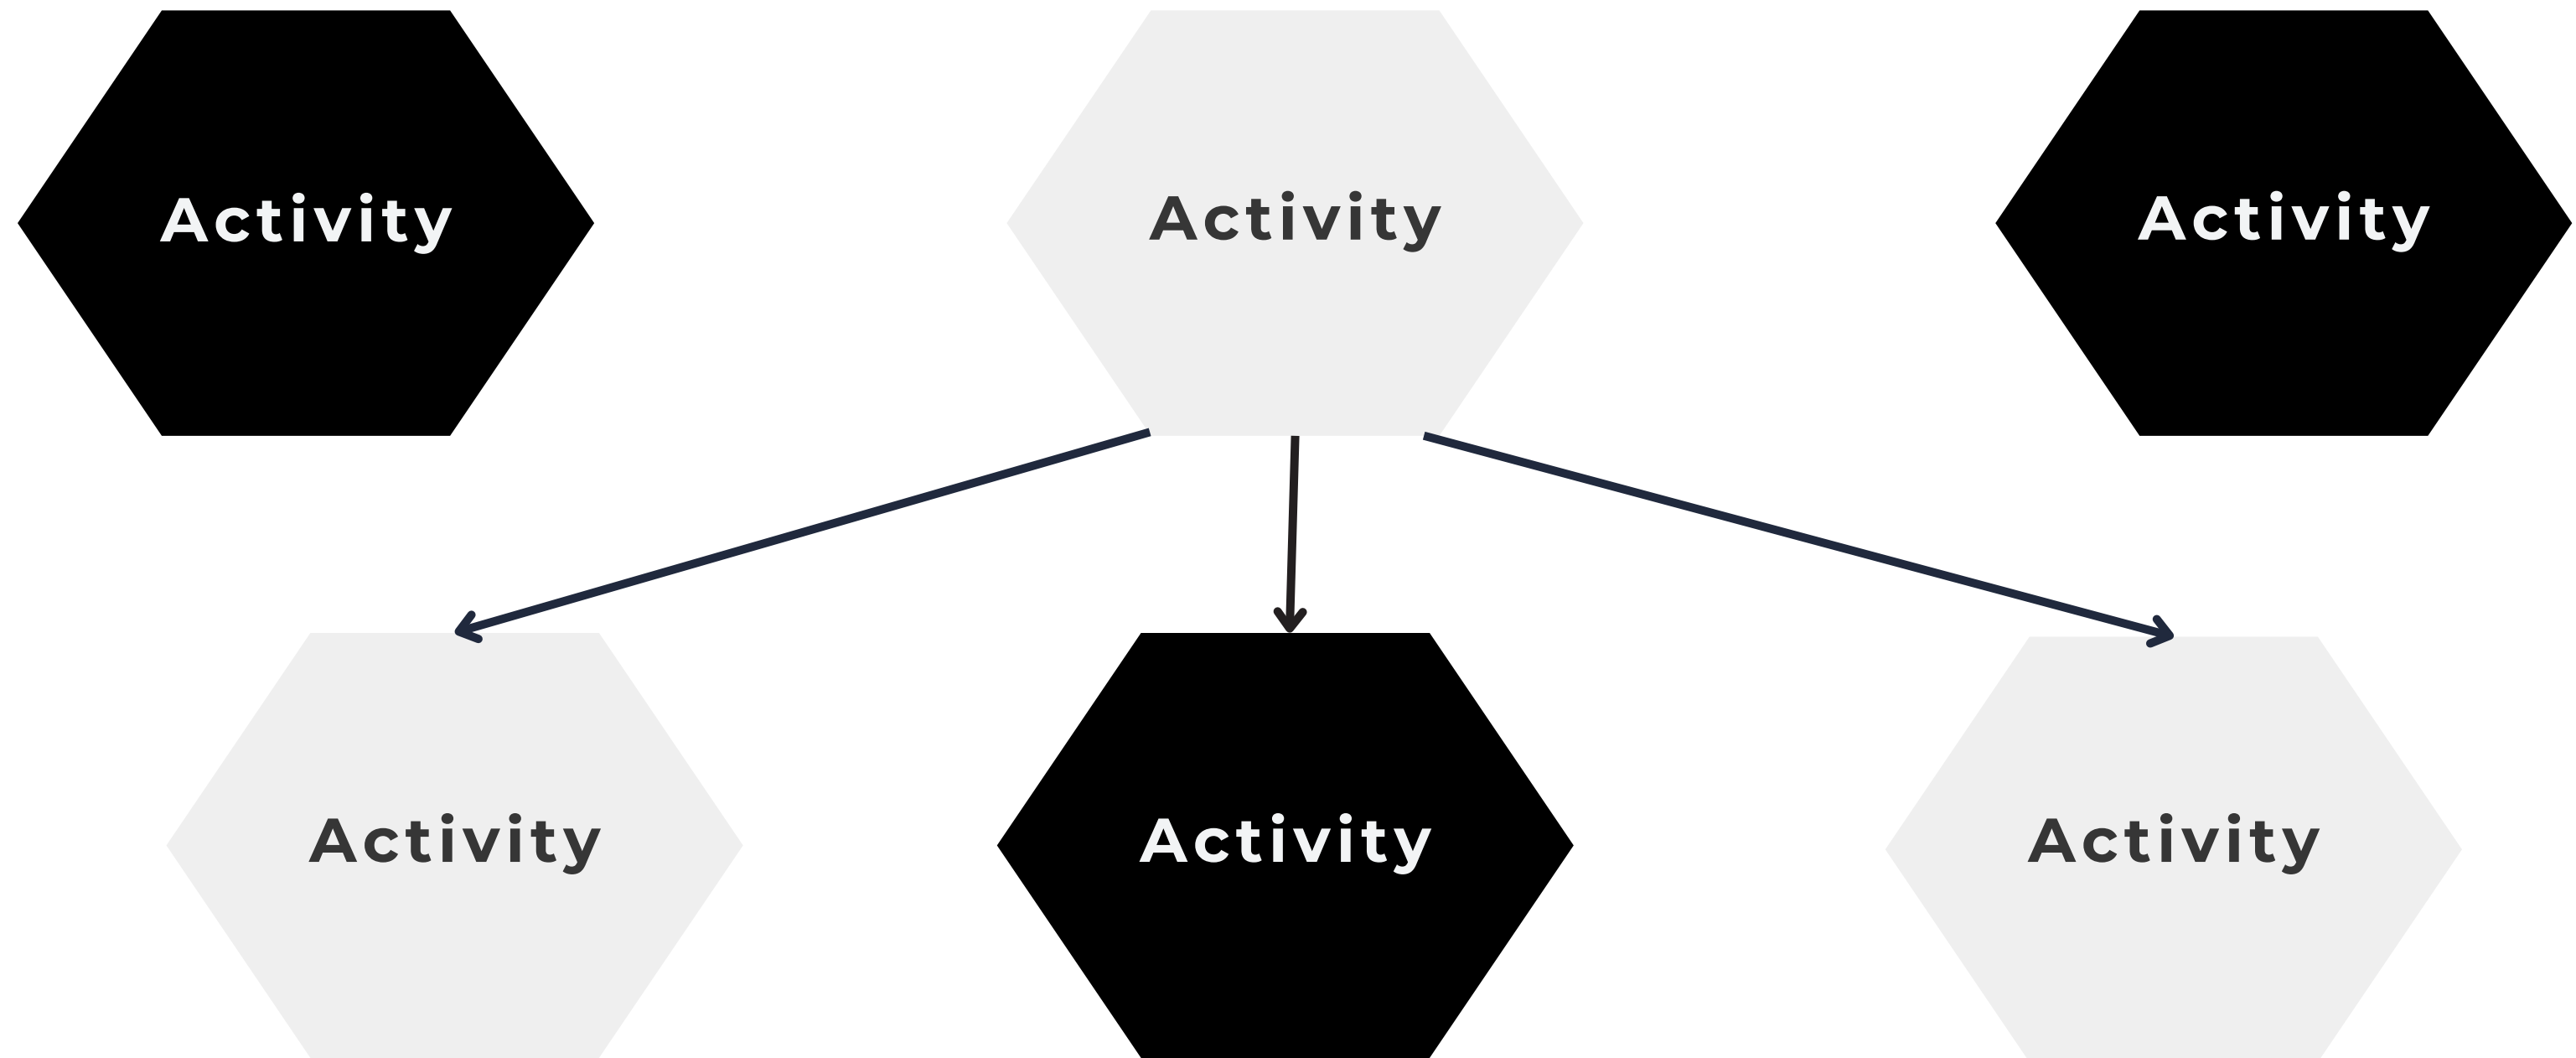

If you have 2 apprches,
compare between them
. If you have one
approavh give details
about it normally

RASULTAT

which one is better

AI

DIAGRAMMES

IMPLÉMENTATION

Libraries

Main libraries and the point of using them

Languages

Programming languages u used during the whole project

Implémentation

How you implemented your project

FUTURE WORK

What are you aiming to add in the future to make your work better and more useful and maintain the things you already started as a plus only

SPEECH

- write down the structure of your speech and rehearse
- Start strong
- Split with Binome
- Always have backup (slides and demo)
- French for presentation (but can be normal in questions)
- Tell a story with smooth transitions

Body language

Switch with your binome

Lower and higher the pitch

Be confident of your solution

Write down Questions and critiques

Not following the structure

Giving so many details

Facing your slides

Complex answers
